Notes _____

Fill out the information on the above half of this sheet. Enclose it in an envelope and include with your gear to be packaged for shipping. *This step is crucial in helping us identify your gear!*

The Best way to ship is to lay one gear inside the other with cardboard in-between and on top and bottom.

Use a full roll of duct tape and mummy wrap together, allowing more tape on the ends to reduce the risk of damage.

Ship Priority mail, FedEx ground, or UPS ground, or Air Freight. Insurance may be waived as this gear is virtually indestructible and will not meet the 2" on all surfaces protection normally required for insurance.

On our return shipping to you, the gear will be packaged in a double wall box with steel banding with the 2" protection. We will insure it for the invoice total or more on your request.
